

# Is your SAP supply chain ready for mobile reality?

**PreBilt™ delivered in the Nordics by S5 Consulting** — SAP Supply Chain Mobility for Norway, Denmark & Sweden. Execute any supply chain process on a mobile device, integrated directly with SAP in real time. Replace paper-based and manual processes with digital workflows to streamline operations, increase productivity, and significantly reduce costs.

S5 CONSULTING — EXCLUSIVE NORDIC DELIVERY PARTNER

 **Every engagement is fixed-price, senior-led, delivered in weeks.**

# Moving to Mobile

Many warehouses, manufacturing plants and distribution centres still rely on: manual processes, paper-based systems and outdated technology — preventing real-time visibility of supply chain operations.

Whether it's PO approval, goods receipt, production, picking or proof of delivery, **manual processes are subject to human error** that leads to inaccurate data, process delays and customer order errors.

**Mobile Capture**

**Realtime Sync**

**SAP Integration**

**Execution & Visibility**

# Operational Benefits

## Stock Accuracy

View accurate stock inventories in real time — crucial for **efficient operations** and a **positive customer experience**.

## Real-Time Data

Accurate business information is **immediately available to everyone** who needs it, enabling informed decisions and proactive action.

## Integration

By integrating end-to-end supply chain processes, it ensures separate supply chain activities **are not recorded and stored in isolation**.

## Staff Onboarding

Intuitive mobile apps **minimise training time, reducing reliance** on experienced staff to train new employees.

## Eliminate Paperwork

Eliminating paperwork reduces data input time, eradicates the risk of losing documentation and **ensures complete traceability**.

## Digital Data

Maintaining all data digitally ensures that information can **always be accessed when needed** and reduces reliance on knowledge stored within paperwork or with individual employees.

# Business Benefits

## Increased Productivity

Mobile devices drive productivity gains by reducing manual task time, improving data accuracy and offering real-time business insights for quick reactions and informed decisions.

## Positive Customer Experience

Real-time insights ensure accurate stock levels and order status can be provided to customers, with queries dealt with quickly and efficiently across all supply chain touchpoints.

## Enhanced Employee Engagement

Intuitive user interfaces, reduced operational errors and fewer customer complaints all contribute to improved employee engagement.

## Improved Profitability

Tangible cost savings through reduced manual and paper-based processes, along with significant labour time savings, enable workforces to work faster and smarter — driving an increase in profitability.

## Reduces Carbon Footprint

Eliminating paper from supply chain processes not only reduces costs and improves efficiency but also helps companies achieve their environmental and waste targets.

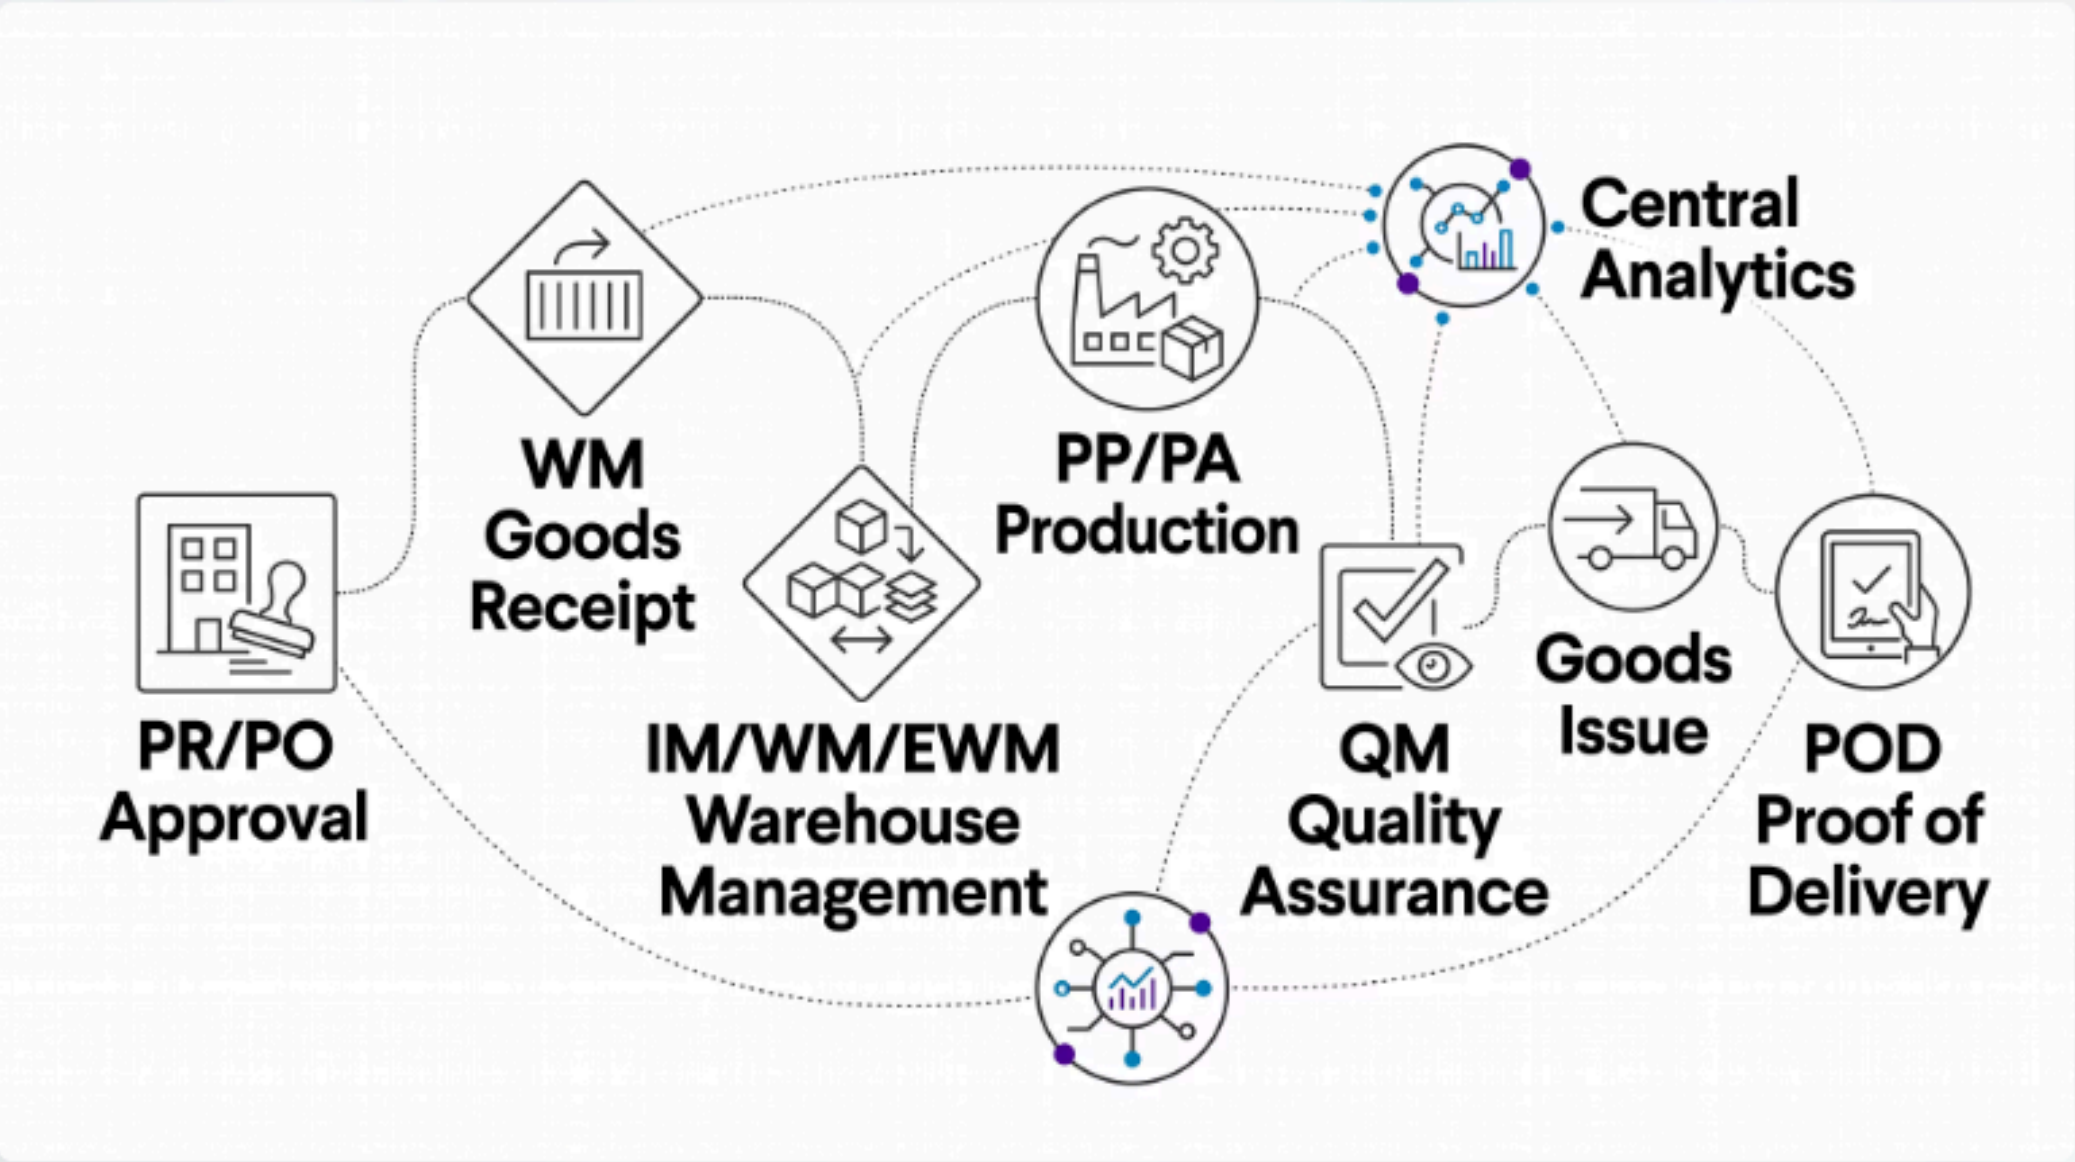

## Improved Order Fulfilment

With increased inventory accuracy, pick locations instantly visible and delivery details available at the touch of a button, orders can be picked, packed and shipped faster to ensure more orders are fulfilled on time in full.

# End-to-End Supply Chain Coverage

**PreBilt is a comprehensive suite of mobile applications** designed to digitise any supply chain process within warehousing, manufacturing and distribution centres — from Goods In through to production, storage, picking and packing, and finally Goods Out. Each business and supply chain process is different, which is why a dedicated team of developers can create innovative, bespoke **mobile application solutions to meet any individual challenge.**

The diagram above illustrates the seamless flow from PR/PO Approval through to Goods Issue and Proof of Delivery, with various stages including Warehouse Management, Production and Quality Assurance — all interconnected through a central analytics network for real-time monitoring across the entire supply chain.

# PreBilt: Functionality by SAP Module

PreBilt facilitates a wide range of processes within every SAP supply chain module. Any combination of IM, WM, EWM, MM, PP, QM, SD, PM and more — deeply engineered for SAP.

IM	Goods Receipt, Putaway, Internal Movement, Physical Inventory, Goods Issue
WM	Goods Receipt, Putaway, Stock Management, Picking & Packing, Staging to Production, Loading
EWM	Unloading, Deconsolidation, Warehouse Inquiry, Physical Inventory, Labour Management, Resource Management, Yard Movement
QM	Result Recording, Notifications, Inspection Lot, Discrepancy Handling & Evidence, Customer Returns, Promotional Items
PP	Materials Reservations, Goods Issue, Kanban, Time Ticket, Production Packing, Create & Confirm Order
MM	Purchase Order Approval, Purchase Requisition Approval, Goods Receipt
POD	Vehicle Checks, Loading, Satellite Navigation, Proof of Delivery
PM	Plant Maintenance, Create Notification, Order Enquiry, Analytics

# PreBilt for Analytics

**PreBilt for Analytics is included as standard** with any combination of SAP WM and EWM mobile apps. A completely integrated solution, **the app enables a live data feed direct from SAP to any mobile device or desktop**. Key metrics are provided in real time so warehouse and production managers have the visibility needed to make informed business decisions.

## How It Works

Featuring a red, amber and green status update to highlight where current operational issues are, the app eliminates the need for manual data analysis. Source information is taken directly from SAP and displayed on mobile devices using a simple and intuitive user interface.

## WM Metrics Examples

- Open Transfer Orders & Transfer Requirements
- Critical Deliveries & Negative Stocks
- Open Posting Change Notices
- Critical Stocks for Production Supply

## EWM Metrics Examples

- Physical Inventory: counted bins, products, documents
- Storage Bins: weights, capacities, warehouse capacity
- Warehouse Orders: open orders, activity areas, time deviation
- Deliveries: outstanding deliveries, total HUs, lead times
- Warehouse Tasks: outstanding tasks, tasks per user, average duration
- Transportation Units: loading duration, total TUs, waiting periods

# Application Features & Mobility Platform

PreBilt offers **enhanced features compared with the standard SAP mobile solution**, on an intuitive and easy-to-navigate platform. The fully responsive user interface features dynamic screen sizing and works with mobile data or Wi-Fi — no additional network infrastructure needed. PreBilt fully **integrates into SAP's supply chain modules**, offers real-time mobility without the need for middleware, and is an SAP-certified alternative to ITS Mobile.

## → Device Agnostic

Works on smartphones, barcode data capture terminals, tablets and ruggedised mobile devices.

## → Barcode Scanning

1D (GS1, SSCC) and 2D (Datamatrix) support.

## → Media Support

Play and save PDFs, product images and training videos.

## → GPS Tracking

Google Maps integration to track stock from dispatch through to delivery.

## → Image Capture

Capture photographic evidence to record discrepancies, damaged goods and comments.

## → Multi-Language

Applications can be translated into any language for global deployment across various users.

## → Sign-on-Glass

Document authorisation and electronic proof of delivery through the mobile application.

## → Warehouse Blackspot Support

Applications can be used when there is temporary loss of connection to ensure data can still be collected or inputted in warehouse blackspots or areas with intermittent network access.

# Mobile Upgrade & Customer Proof

Some companies already experience limited benefits of mobility through SAP's standard mobile solution, typically ITS Mobile. While ITS offers basic capabilities, its user interface is difficult to navigate and has functional limitations within supply chain environments. By comparison, PreBilt offers **easy-to-use applications that integrate seamlessly with SAP, can be used on or offline, and offer a whole host of value-added features** — all designed with the end user in mind.

If companies are already operating ITS Mobile, **S5 Consulting can simply convert existing ITS applications to the equivalent PreBilt mobile solutions**, allowing increased functionality and improved user experience without wasting the investment already made.

## Don't Take Our Word for It

“

"Since implementing mobile applications from The Config Team, our new staff training time has gone from four days to two hours."

— *Automotive User (via The Config Team)*

“

"We have removed somewhere near to 2.5 million pieces of paper through implementing the SAP Proof of Delivery App from The Config Team. Eliminating such a volume of paperwork has revolutionised that side of our supply chain."

— *Food Production User (via The Config Team)*
